

Training Program

Ketan Bhoje

Ketan Overview

Details

1. Goals- Primarily Fat loss, Some Muscle building
2. Profession- Software Engineer
3. Weight- 85.5 kg
4. Wake up- 8:30 am
5. Sleep- 11:30 pm
6. Workout Time- 7:00 pm
7. Musculoskeletal Injury- None

TRAINING SPLIT

Day	Workout Name
Monday	Workout A- Push
Tuesday	Workout B- Pull
Wednesday	Workout C- Legs
Thursday	Workout A- Push
Friday	Workout B- Pull
Saturday	Workout C- Legs
Sunday	-

Guidelines for Training Split

- Workout A, B and C should be done 2 times a week respectively.
- You can take 1 day off every week, in case you miss a workout on any of the weekdays, please workout on Sunday in place of that.
- For the first 2-3 workouts don't exert yourself 100%, this can cause high amounts of soreness and body pain.
- For the first week, just do 2 sets instead of 3.
- For cardio, you can go for a 30 minute jog, 3 times a week.

Workout A

No.	Exercise	Sets	Reps	Notes
1	Incline DB Press	3	6-12	Link Think of bringing your arms closer together, instead of pressing the weight up.
2	DB Overhead Press	3	6-12	Link Ensure that your elbows are under the dumbbells throughout the range of motion.
3	Dumbbell Press	3	6-12	Link Keep your arms 45-60 degrees from your torso.
4	Cable Decline Crossover	3	6-12	Link You can ask someone to stabilise you from behind. If unavailable, you can perform a decline DB press.
5	Cable Side Raise	3	6-12	Link Ensure you are bringing your arm down slowly. If unavailable, you can perform a DB lateral raise.
6	Cross Body Tricep Pushdown	3	6-12	Link Your elbows should be in line with the cable. Ensure you have some resistance throughout the range. In case you don't have 2 cables, you can do it with 1 cable .
7	Overhead Tricep Extension	3	6-12	Link If you don't have access to 2 cables, you can do it 1 hand at a time. If not, you can do it with DB as well.
8	AB Crunches	3	6-12	Link Focus on curling your spine, don't focus on getting up.

Workout B

No.	Exercise	Sets	Reps	Notes
1	Neutral Grip Lat Pulldown	3	6-12	Link In case a neutral grip is not available, you can use a pronated grip on a straight bar.
2	Reverse Pecdec	3	6-12	Link If you don't have access to a Reverse Pecdec, you can use Dumbbells.
3	Cable Row	3	6-12	Link Pull the elbows close to your torso to emphasise your lats.
4	Wide Grip Rows	3	6-12	Link Pull your arms at 45 degrees to your torso. This will bias your mid-back.
5	Hammer Curl	3	6-12	Link Don't swing your arm inwards.
6	Supported Bicep Curl	3	6-12	Link Ensure there is a slight tension on the biceps at the start
7	BB shrugs	3	6-12	Link Lean forward and squeeze your shoulder blades together. Use a 1.5x shoulder-width grip.
8	Spinal Extension	3	6-12	Link This is meant to strengthen your spinal erectors. In case you don't have this machine, perform floor hyperextension .
9	Wrist Flexions	3	6-12	Link
	Wrist Extensions	3	6-12	Link

Workout C

No.	Exercise	Sets	Reps	Notes
1	Smith Machine Squats	3	6-12	Link Placing your feet slightly forward will emphasize the quads. If you don't have access to a smith machine, you can perform barbell squats in the range of motion that you don't have butt wink.
2	Leg Extension	3	6-12	Link Ensure your knee is pointing straight up.
3	Seated Leg Curl	3	6-12	Link Stabilize your legs and focus all the effort on your hamstring.
4	Leg Press	3	6-12	Link Lockout your knees slowly, don't hyperextend them.
5	Romanian Deadlift	3	6-12	Link Ensure that your back isn't rounding.
6	Standing Calf Raise	3	6-12	Link Don't bounce at the bottom.

Exercise Guidelines

- Warming up simply entails performing the same activities at a lower intensity. You are not required to undertake general warm-up exercises before lifting weights. Before participating in sports, where your body may encounter sudden, unforeseen forces, it is a good idea to perform general warm-up exercises. However, they are not necessary for working out in controlled environments like the gym.
- For warming up, you can perform 1 to 3 sets with 50-80% weight of your main set's weight till you feel your muscles working. You can continue with your main sets after this.
- Use a weight to meet your target reps; if your target is 12-20 reps but you can only manage 6 reps with 20 kgs, lower the weight to 15 kgs for a minimum of 12 reps. As you reach 20 reps with 15kg dumbbells, increase the weight to 17.5 kgs, with which you should be able to do 12 reps or so.
- Stop 1-2 reps before failure for rep ranges of 6-12.
- Train to failure for rep ranges of 12-20.
- Tempo- 313 (3 seconds up, 3 seconds down, 1-second pause)
- Keep your rest intervals between 1-3 minutes.
- In each exercise, concentrate on the target muscle. Consider two locations in the target muscle and try to bring them closer together.
- Exercises should be enjoyable. The tension should be felt in the muscles, not the joints.
- **Important-** Every week increase 1-2 reps with the weight you are using, and once you cross the target rep range, increase the weight so that you are performing reps in the target rep range.
